Product requirements

Objective

Integrated management system for company's commercial activities, such as: stock movement, customers, documents, employees, taxes, products, services, finance.
The system will have access control to modules based on roles.
Each company (customer) will have a dedicated database instance, and the application will be able to make connections to multiple different databases at the same time.
The main advantage of this model is the "physical" isolation, isolating the impact of each company's operations.
The system will also have a benefit creation mechanism with the distribution of vouchers or tokens using blockchain technology.

Overview

Requirements

Requirement	User Story	Status
Login	As a registered user I want to login to the application.	DONE
Login with 2FA	As a registered user I want to login to the application securely.	DONE
Password Recovery and Change	As a registered user I want to recover my password or change it if necessary.	DONE
